

## Amendment Overview: Soil Amendments

### TEP Leonardite

Improve water penetration, water retention, and soil aeration with TEP Leonardite. This concentrated, dry source of humic acid helps improve the physical condition of the soil, while also enhancing the uptake of nutrients and stimulating soil life.

### TEP CalMend

Formerly known as Agrimend, TEP CalMend is a highly soluble form of calcium. This amendment is extremely water soluble and full of micro-nutrients. The application rate for TEP CalMend in comparison to Gypsum is 1:10.

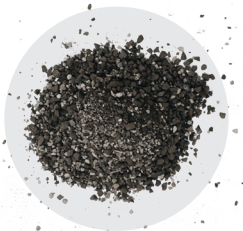

### TEP CalNite

TEP CalNite is a blend of our TEP Leonardite and our TEP CalMend (formerly known as Agrimend). This one-of-a-kind blend brings humic acid and a highly soluble form of calcium to your soil profile. The synergy between these two high-quality products will lock up salts and open your soils, thus creating an overall healthier environment for your crop.

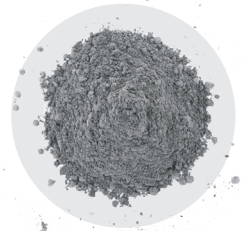

### TEP CalPhos

Increase your plant available phosphate numbers naturally with TEP CalPhos. This product is a three-way blend of our TEP Leonardite, Soft Rock Phosphate, and TEP CalMend (formerly known as Agrimend,). This unique combination allows us to achieve a balanced, dry blend for your soil.

### TEP PhosNite

By combining our Soft Rock Phosphate with our TEP Leonardite, your plant available phosphorus and humic levels are sure to increase in your soil profile. The addition of this amendment in your fertilizer program will increase the overall health of your plants.

### TEP CalPhos+

TEP CalPhos+ is a blend made up of our TEP Leonardite, TEP Soft Rock Phosphate, and Wollastonite. This multi-faceted product promotes Humic, Phosphate, and Silica numbers naturally, while keeping aluminum levels low.
